

SPANNER AND STATE OF THE CONTROL OF STATE OF STA

Its elegant, spacious, and lauurious body captures the attention at first sight. Also the chassis with tubular frame bifurcated at the front, and fitted with hide-pendent suspension of both the front and rear wheels, has been improved and re-designed, in many details. The 4-sylinder 4-stroke engine is distinguished by its elastic and silent running. A 4-sped synchromesh gearbox forming with the engine a solid unit, hydraulic brokes, central lubrication system, water cooling with pump and thermostat complete the characteristic features of the car. The "SKODA-1101" is carefully manufactured of first-grade materials ensuring long life, dependability and economy. Its petrol consumption is a mere 8 litres per 100 km or 35 m. p. g. This model represents one of the most advanced designs of its class and is the subject of a lively interest abroad as testified by substantial deleviers to all parts of the world.

The ENGINE is a four-cylinder, four-stroke water-cooled unit with overhead valves, output 32 HP, cylinder capacity 1,1 litres, bore 68 mm, stroke 75 mm. The crankshaft fitted with counter-weights runs in three bearings. This engine has proved its power and low consumption in thousands of \$KODA "TEN" and "ELEVEN" cars. In the new model it has been improved and equipped with a new threepoint elastic suspension eliminating transmission of vibration. The ribbed aluminium bottom of the crankcase allows an efficient cooling of oil. The CIRCULATING LUBRICATION SYSTEM ensures long life of all bearings. The oil is kept in good condition by an efficient oil cleaner and perfect ventilation of the crankcase. Noiseless running is effected by a suction silencer. The fuel piping is provided with a trap for the separation of water and impurities. The CHASSIS is formed by a strong steel tube backbone bifurcated in front to take the rubber mounted engine designed in one block with the four-speed gearbox. The second, third and fourth gears are silent, and the third and fourth are synchronized. All the shafts of the gearbox run in ball and needle bearings. A dry single-disc clutch may easily be disengaged and guarantees soft engagement. The SCREW- and -NUT STEERING fitted with a large self-returning steering wheel ensures easy control. SAFE DRIVING even at high speeds and on poor roads is guaranteed by a perfectly designed independent suspension of all four wheels in conjunction with dependable hydraulic brakes. The rear transverse spring is arranged above the rear axle

COMFORT,

EASY CONTROL,

Tubular backbone chassis bifurcated at the front, engine mounted on three rubber pads, independent suspension of all four wheels, four-speed synchronized gear box, hydraulic brakes, central lubrication.

front spring is fitted with hydroulic shock obsorbers. The spring suspensions and the averaging semi-axies are placed in silentifices. The new design of brothes consists of enlarged brothing surfaces and a simplified odjustment. The stricticity and dynomically belanced propeler shoft is fitted with universal colints running in models bearings of exceptional durability. A central obstrating system medies operation and maintenance very simple. The BODY An attractive grill timesed with published listices of light metal, the neutropart of an adome shope with flushed head lights and the entire form of the body make the car uncommonly relegant. A connel y doubtaout fitned with design frame grillength and space to lake a radia, ge elegant steering wheel and a glove compariment with lid complete the inner equipment. Folding race vindows permit draft-free ventilation. A large locable space for luggage is accessible from both inside and outside.

PRINCIPAL DATA

Particular LOAA:

Overoil length 4,050, width 1,000 and height 1,500 mm (delivery van 1,660 mm. Maximum speed over 100 km per hour. or 60 M. p. h. Consumption obt. 8 littes per 100 km or 35 m. p. g. Fiel shark copocity 35 littes or 7½ gallons with resarve for 50 km, sufficient for obour 400 km or 240 miles. Weight in working order coz 900 kg. All modifications reserved.

The "SKODA-101" has proxed its ligh standard and the possibility of its allround use on long-distance journeys. It crossed alone, without only assistance from other cons, the Sohara desert and overcome oil difficulties of the ground and the tropical sun. This is an ejoquent proof of its utmost reliability and safety in operation.

all over the work

The "SKODA-1101 MOTORS" the noteworthy success of which in the international markets prior to the war is still being remembered and which won outstanding victories in international competitions and races, have been further improved after the war. The new "SKODA-1101" is the result of successful endeavours of our technical designers to incorporate in it the latest technical achievements.

The "SKODA-1101" is supplied to all parts of the world where it is highly valued for its excellent driving properties. It is proving daily its high technical standard and quality under the most diversified conditions of ground and climate in the heat of the tropical sun, in the frosty climate of northern countries, on flat ground as well as on hills, on the best roads as well as on the poorestones, on

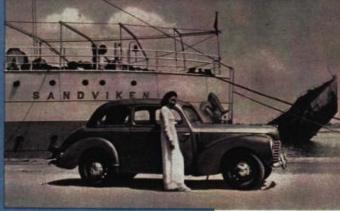

concrete and in the sands of Sahara. In contests of elegance and in races the "SKODA-1101" is just as successful.

Its elegant, spacious, and luxurious body captures the attention at first sight. Also the chassis with tubular frame bifurcated at the front, and fitted with independent suspension of both the front and rear wheels, has been improved and re-designed in many details. The 4-cylinder 4-stroke engine is distinguished by its elastic and silent running.
